### RGB CONTROLLER MODULE

#### SDL-3900 Controller

The SDL-3900 LED RGB Controller can be used to drive RGB FlexLED SMT, PowerStrip V15/30 in conjunction with a suitable 12/24v dc power supply. 0-100% dimming. The SDL-3900 Panel & SDL-3900 Remote can be used with this controller for wireless control.

#### Specifications

|                     |   |
|---------------------|---|
| Voltage             | 12/24 V dc                                  |
| Connections         | Screw Terminal                              |
| Ambient Temperature | -20 to +60 Degrees Centigrade               |
| Output              | 3 x 4 Amp                                   |
| Changing Mode       | 21 modes                                    |
| Controls            | + & - Brightness, + & - Speed, Mode, On/Off |
| Colour Depth        | 256 levels                                  |
| Mounting            | Surface                                     |
| Dimensions          | 130mm x 40mm x 30mm                         |
